

* comments in Python (use to explain complex ^{Day 2 30/10/25} code or logic).

1. Single line comments (#)

2. multi-line comment (using ''' ''' or """ """)

''' ----- '''

* keywords in Python

- keywords are special reserved words in Python that have predefined purposes
- you cannot use them as variable names, function names.

Ex:

1. False, True : Boolean
2. And : Logical operator
3. class : Defines a class
4. continue : Skip the rest of the loop and goes to the next iteration
5. def : defines a function

* Variables

- A variable in Python is a name that stores a value in the PC memory.
- It act like a container.
